Author Index

Alcock, R. J.	Synergistic classification systems for wood defect identification	127–133
Alcock, R. J.	Automated visual inspection of wood boards: selection of features for defect classification by a neural network	231–245
Andrews, J. D.	Techniques for modelling the frequency of explosions on offshore platforms	111–119
Andrews, J. D.	Genetic algorithms in optimal safety system design	187–197
Attenborough, K.	Measured dependence of the attenuation of audio-frequency sound on concentration in flowing particulate suspensions	45–56
Avery, P.	A computational and experimental study of flows in a distribution chamber: validation of a numerical model	217–230
Bannister, R. H.	Condition monitoring of low-speed rotating machinery using stress waves. Part 1	153–170
Bannister, R. H.	Condition monitoring of low-speed rotating machinery using stress waves. Part 2	171–185
Beck, S. B. M.	A non-dimensional method to increase the accuracy of turbine flowmeters	121–126
Bissessur, Y.	Machine condition monitoring for consistent paper production	141–151
Bridle, I.	The analysis of particle degradation in pneumatic conveyors utilizing a pilot-sized test facility	85–91
Caputo, A. C.	Polyfunctional plants for industrial waste disposal: a case study for small enterprises	1–9
Caputo, A. C.	Polyfunctional plants for industrial waste disposal: capacity analysis	11–16
Carey, V. P.	Use of extended exergy analysis to evaluate the environmental performance of machining processes	247–264
Creyts, J. C.	Use of extended exergy analysis to evaluate the environmental performance of machining processes	247–264
Cuthbert, M. R.	A non-dimensional method to increase the accuracy of turbine flowmeters	121–126
Ebrahimi, M.	Process control with minimum control effort	275–289
Findlay, G. E.	Condition monitoring of low-speed rotating machinery using stress waves. Part 1	153–170
Findlay, G. E.	Condition monitoring of low-speed rotating machinery using stress waves. Part 2	171–185
Foster, K. J.	Techniques for modelling the frequency of explosions on offshore platforms	111–119
Gallagher, G. J.	Effects of local flow on the heat transfer characteristics of a cowled, finned system	99–110
Galletly, G. D.	Buckling of imperfect elastic elliptic toroidal shells subjected to uniform external pressure	199–214
Griffiths, A. J.	Effects of local flow on the heat transfer characteristics of a cowled, finned system	99–110
Grosvenor, R. I.	Sensor-based performance monitoring of a control valve unit	71–84
Hollaway, L.	An approach to design for reliability	61–67
Jafargholi, K.	Numerical simulation of laminar natural convection in horizontal annuli with radial fins	93–97
Lin, S.	Effects of local flow on the heat transfer characteristics of a cowled, finned system	99–110
Liu, J. S.	An approach to design for reliability	61–67
Liu, S. Y.	Recovery of waste rubber through pulverization at a low temperature of refrigeration by an air turbine	135–138
Lordan, M.	A review of creativity principles applied to engineering design	17–31
Lucia, U.	The capacitive method as an industrial experimental technique of analysis of the cavitation and two-phase flows	57–59
Mansouri, S. H.	Numerical simulation of laminar natural convection in horizontal annuli with radial fins	93–97
Martin, E. B.	Machine condition monitoring for consistent paper production	141–151
Mba, D.	Condition monitoring of low-speed rotating machinery using stress waves. Part 1	153–170
Mba, D.	Condition monitoring of low-speed rotating machinery using stress waves. Part 2	171–185
Mehrabian, M. A.	Numerical simulation of laminar natural convection in horizontal annuli with radial fins	93–97
Morris, A. J.	Machine condition monitoring for consistent paper production	141–151
Moss, S. H. O.	Measured dependence of the attenuation of audio-frequency sound on concentration in flowing particulate suspensions	45–56
Nau, B. S.	Design for optimum gasket assembly stress and leak rate control in bolted gasketed joints	33–44
O'Doherty, T.	Effects of local flow on the heat transfer characteristics of a cowled, finned system	99–110
Pattison, R. L.	Genetic algorithms in optimal safety system design	187–197
Pelagagge, P. M.	Polyfunctional plants for industrial waste disposal: a case study for small enterprises	1–9
